

wildlife

PRESENTED BY SANJITHA.S

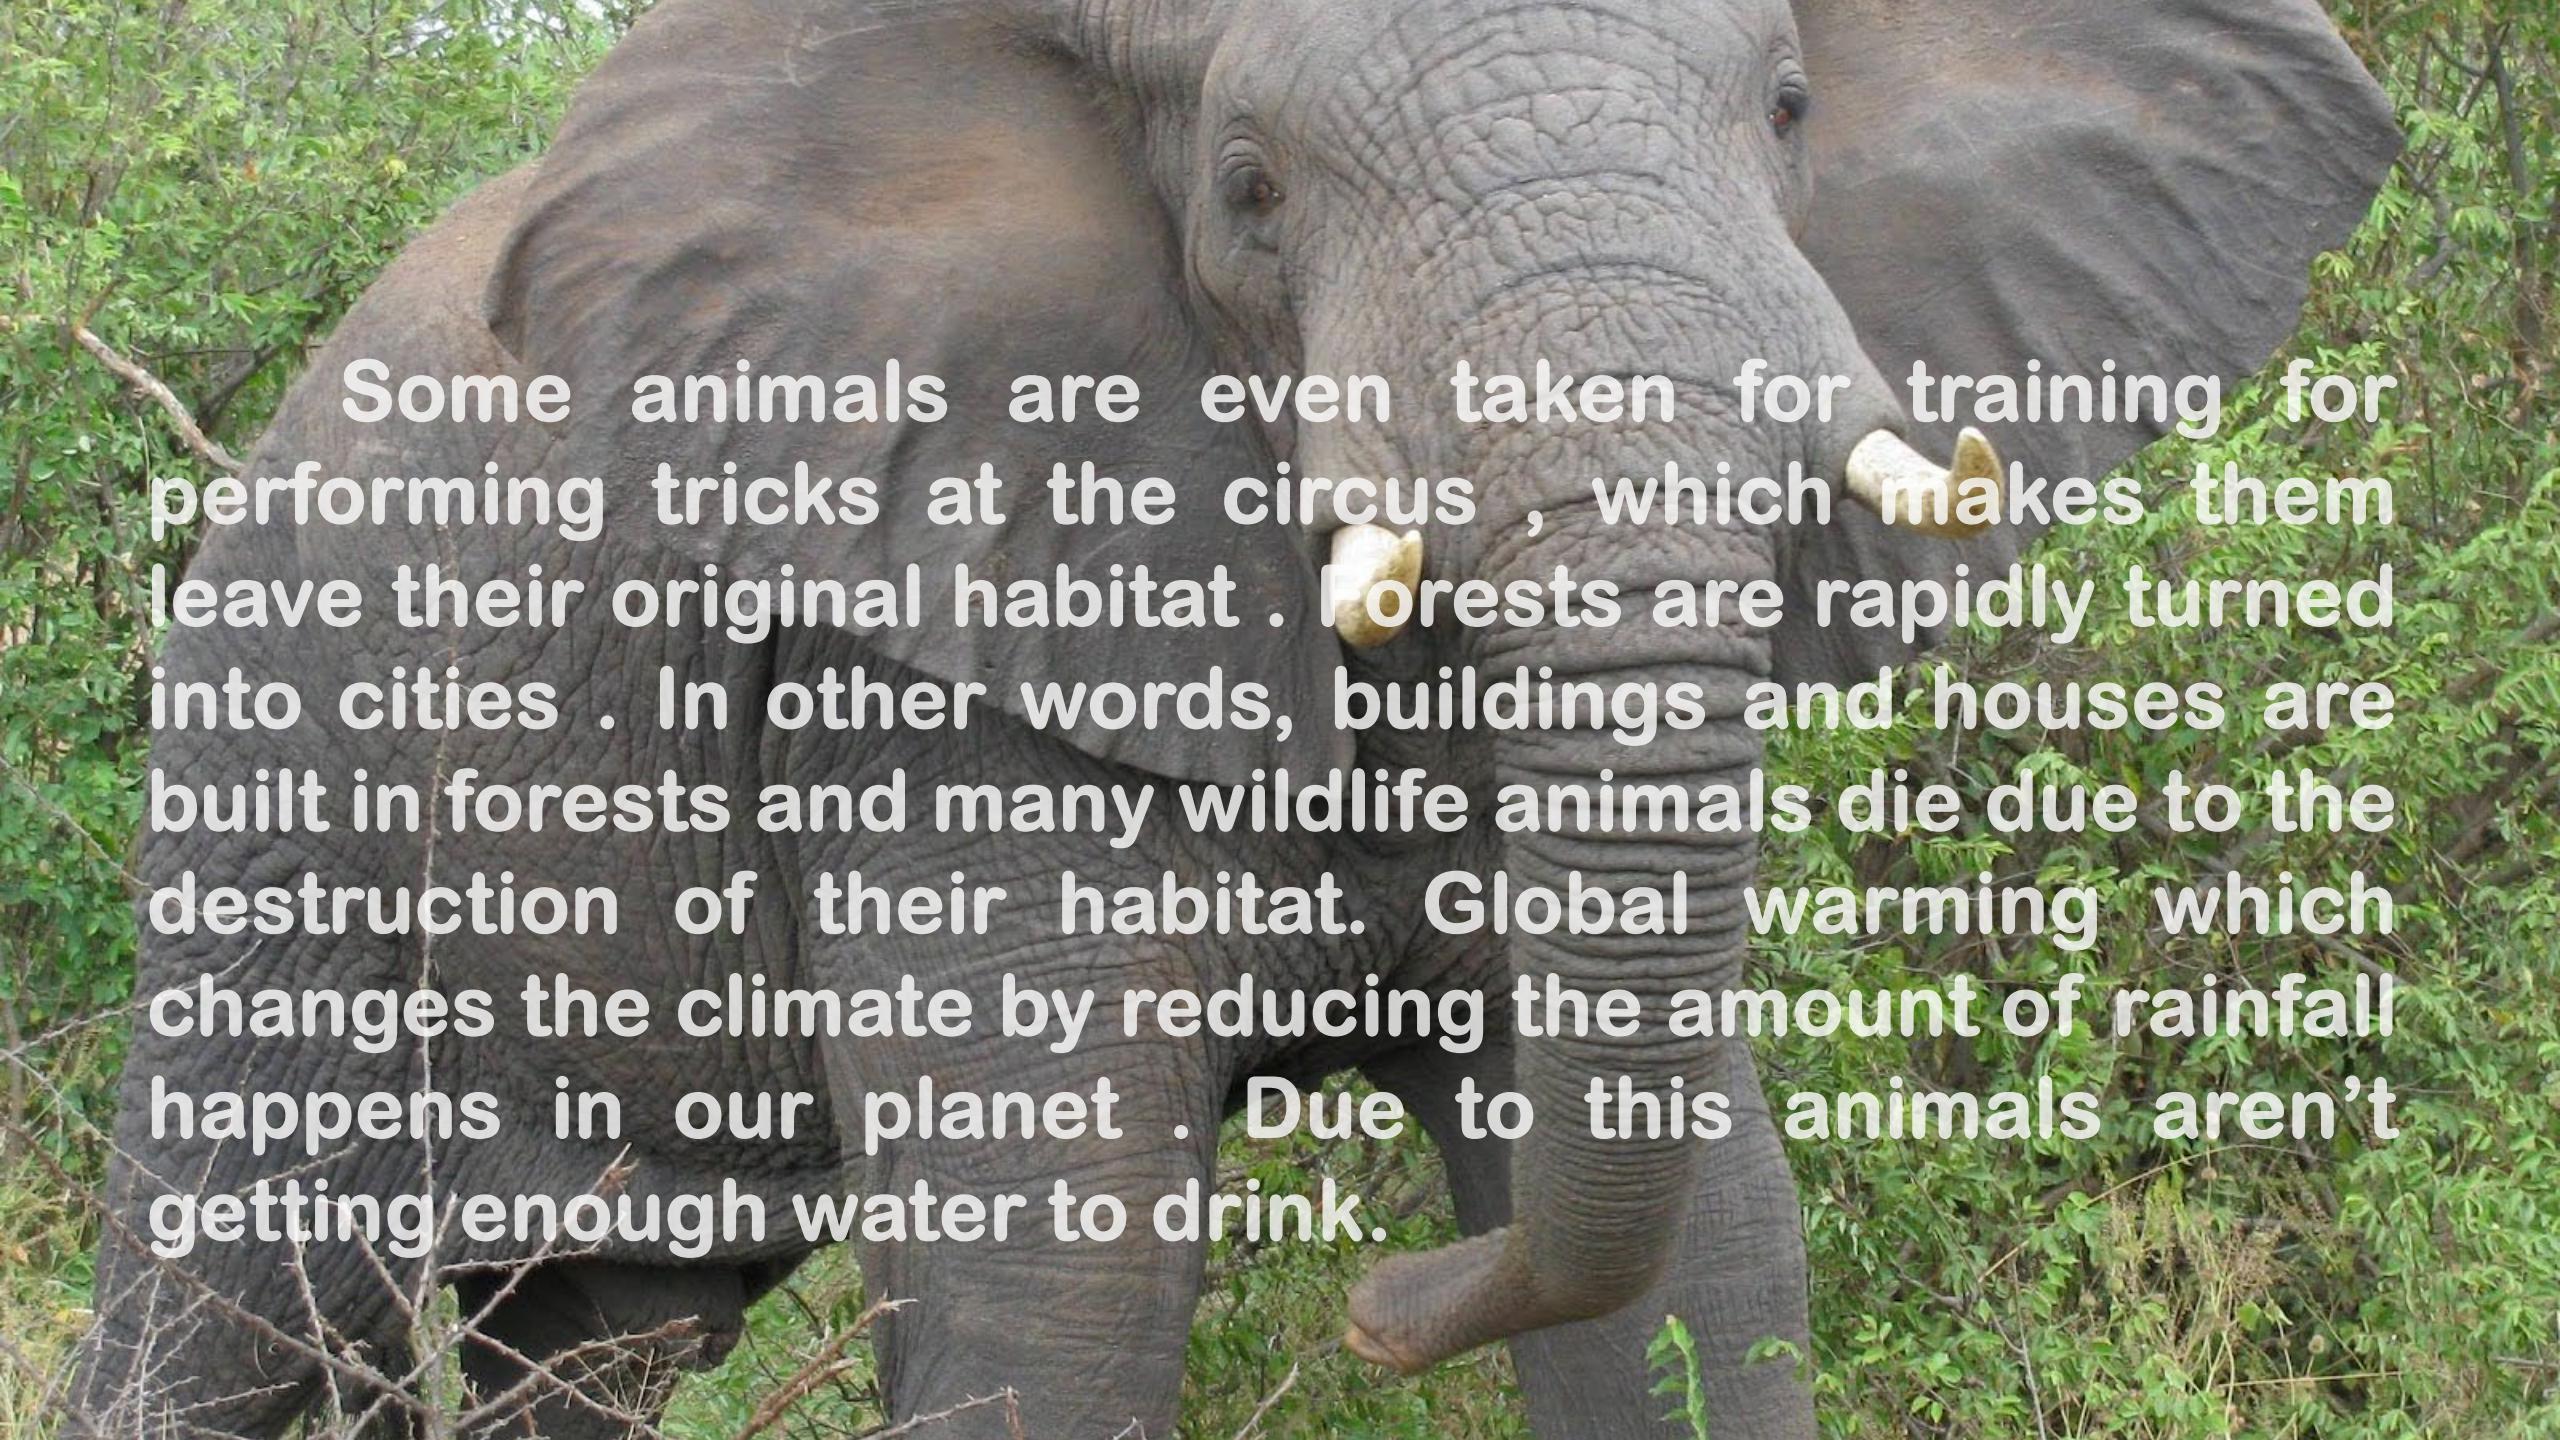

- 
- This world is not only for humans , it is for every life that lives.
 - But in this generation , we humans are rapidly destroying the wildlife directly or indirectly ; with our knowledge or even without our knowledge !
 - So, to avoid that and protect the wildlife here are the threats to wildlife and my solutions for it.

Threats :-

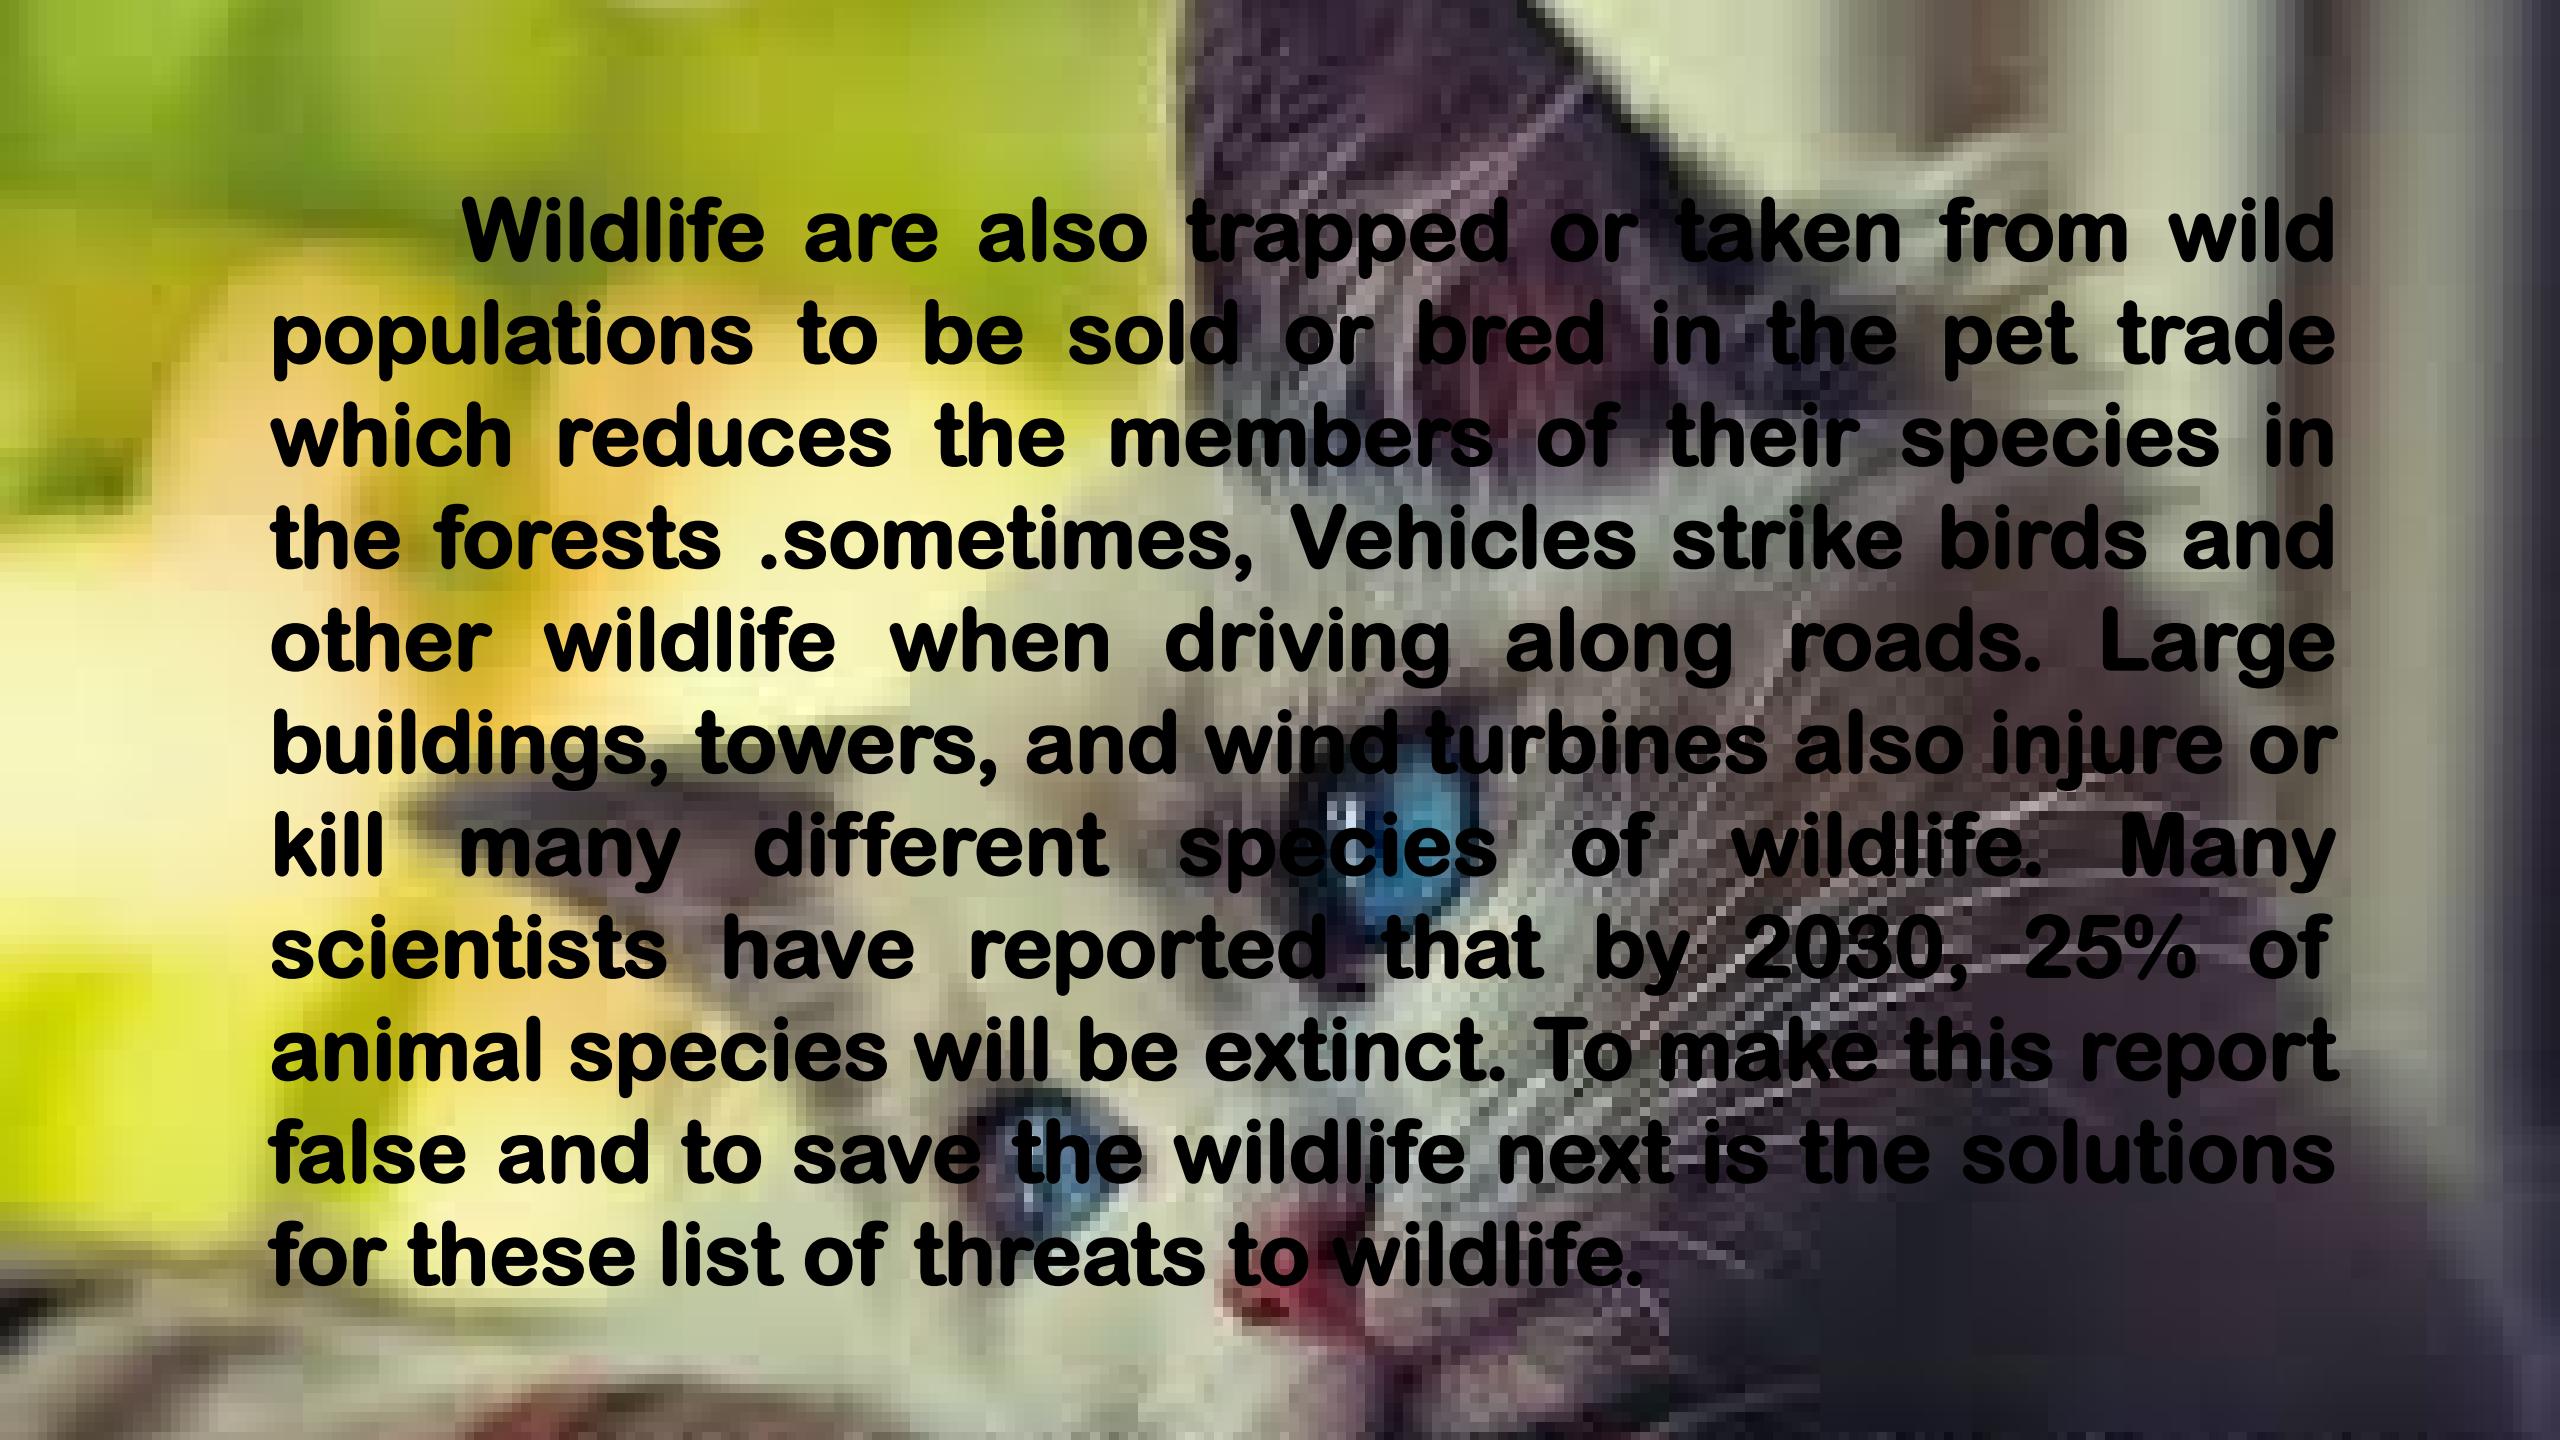

Think of our everyday use – paper and cardboard which is obtained from cutting trees and most of the trees are in the forest of our earth , many arboreal animals such as leopards , birds , pandas etc. lose their habitats and become endangered and gradually extinct ! We also cut trees for making furniture , pencils etc. usually people throw away plastics and toxic wastes which animals consume. Many urban as well as people who live in forests or hills hunt wildlife animals for meat!

Some animals are even taken for training for performing tricks at the circus , which makes them leave their original habitat . Forests are rapidly turned into cities . In other words, buildings and houses are built in forests and many wildlife animals die due to the destruction of their habitat. Global warming which changes the climate by reducing the amount of rainfall happens in our planet . Due to this animals aren't getting enough water to drink.

A close-up photograph of a seagull standing on a sandy beach. The bird is facing left, with its head turned slightly towards the camera. It has white plumage with dark brown spots on its wings and tail. In its open beak, it holds a clear plastic bottle, which appears to be crushed or partially broken. The background is a bright, hazy blue sky and a sandy shore.

Pollution is another reason which threatens wildlife. Pollutants can change ecosystems and can have severe effects on wildlife and the natural environment. Many animals absorb harmful gas coming from factories that ultimately get passed along through the food chain.

Wildlife are also trapped or taken from wild populations to be sold or bred in the pet trade which reduces the members of their species in the forests .sometimes, Vehicles strike birds and other wildlife when driving along roads. Large buildings, towers, and wind turbines also injure or kill many different species of wildlife. Many scientists have reported that by 2030, 25% of animal species will be extinct. To make this report false and to save the wildlife next is the solutions for these list of threats to wildlife.

A close-up photograph of a red fox sitting in a field of bright green grass. The fox is facing left, with its head turned slightly towards the camera. Its fur is a vibrant orange-red color, with darker areas around its ears and a white patch on its chest. The background is a soft-focus view of more green grass.

Illegal trapping, poaching, and other demands for wildlife are a huge problem throughout the world. Many species are sought for their use as valuable products. Snakes are sought for their skins, elephants for their ivory tusks, birds for their feathers etc.

Solutions :-

This might be a biggest question running many people's mind – there are a lot of threats to wildlife what about solutions for it?

Here are ways to protect wildlife:-

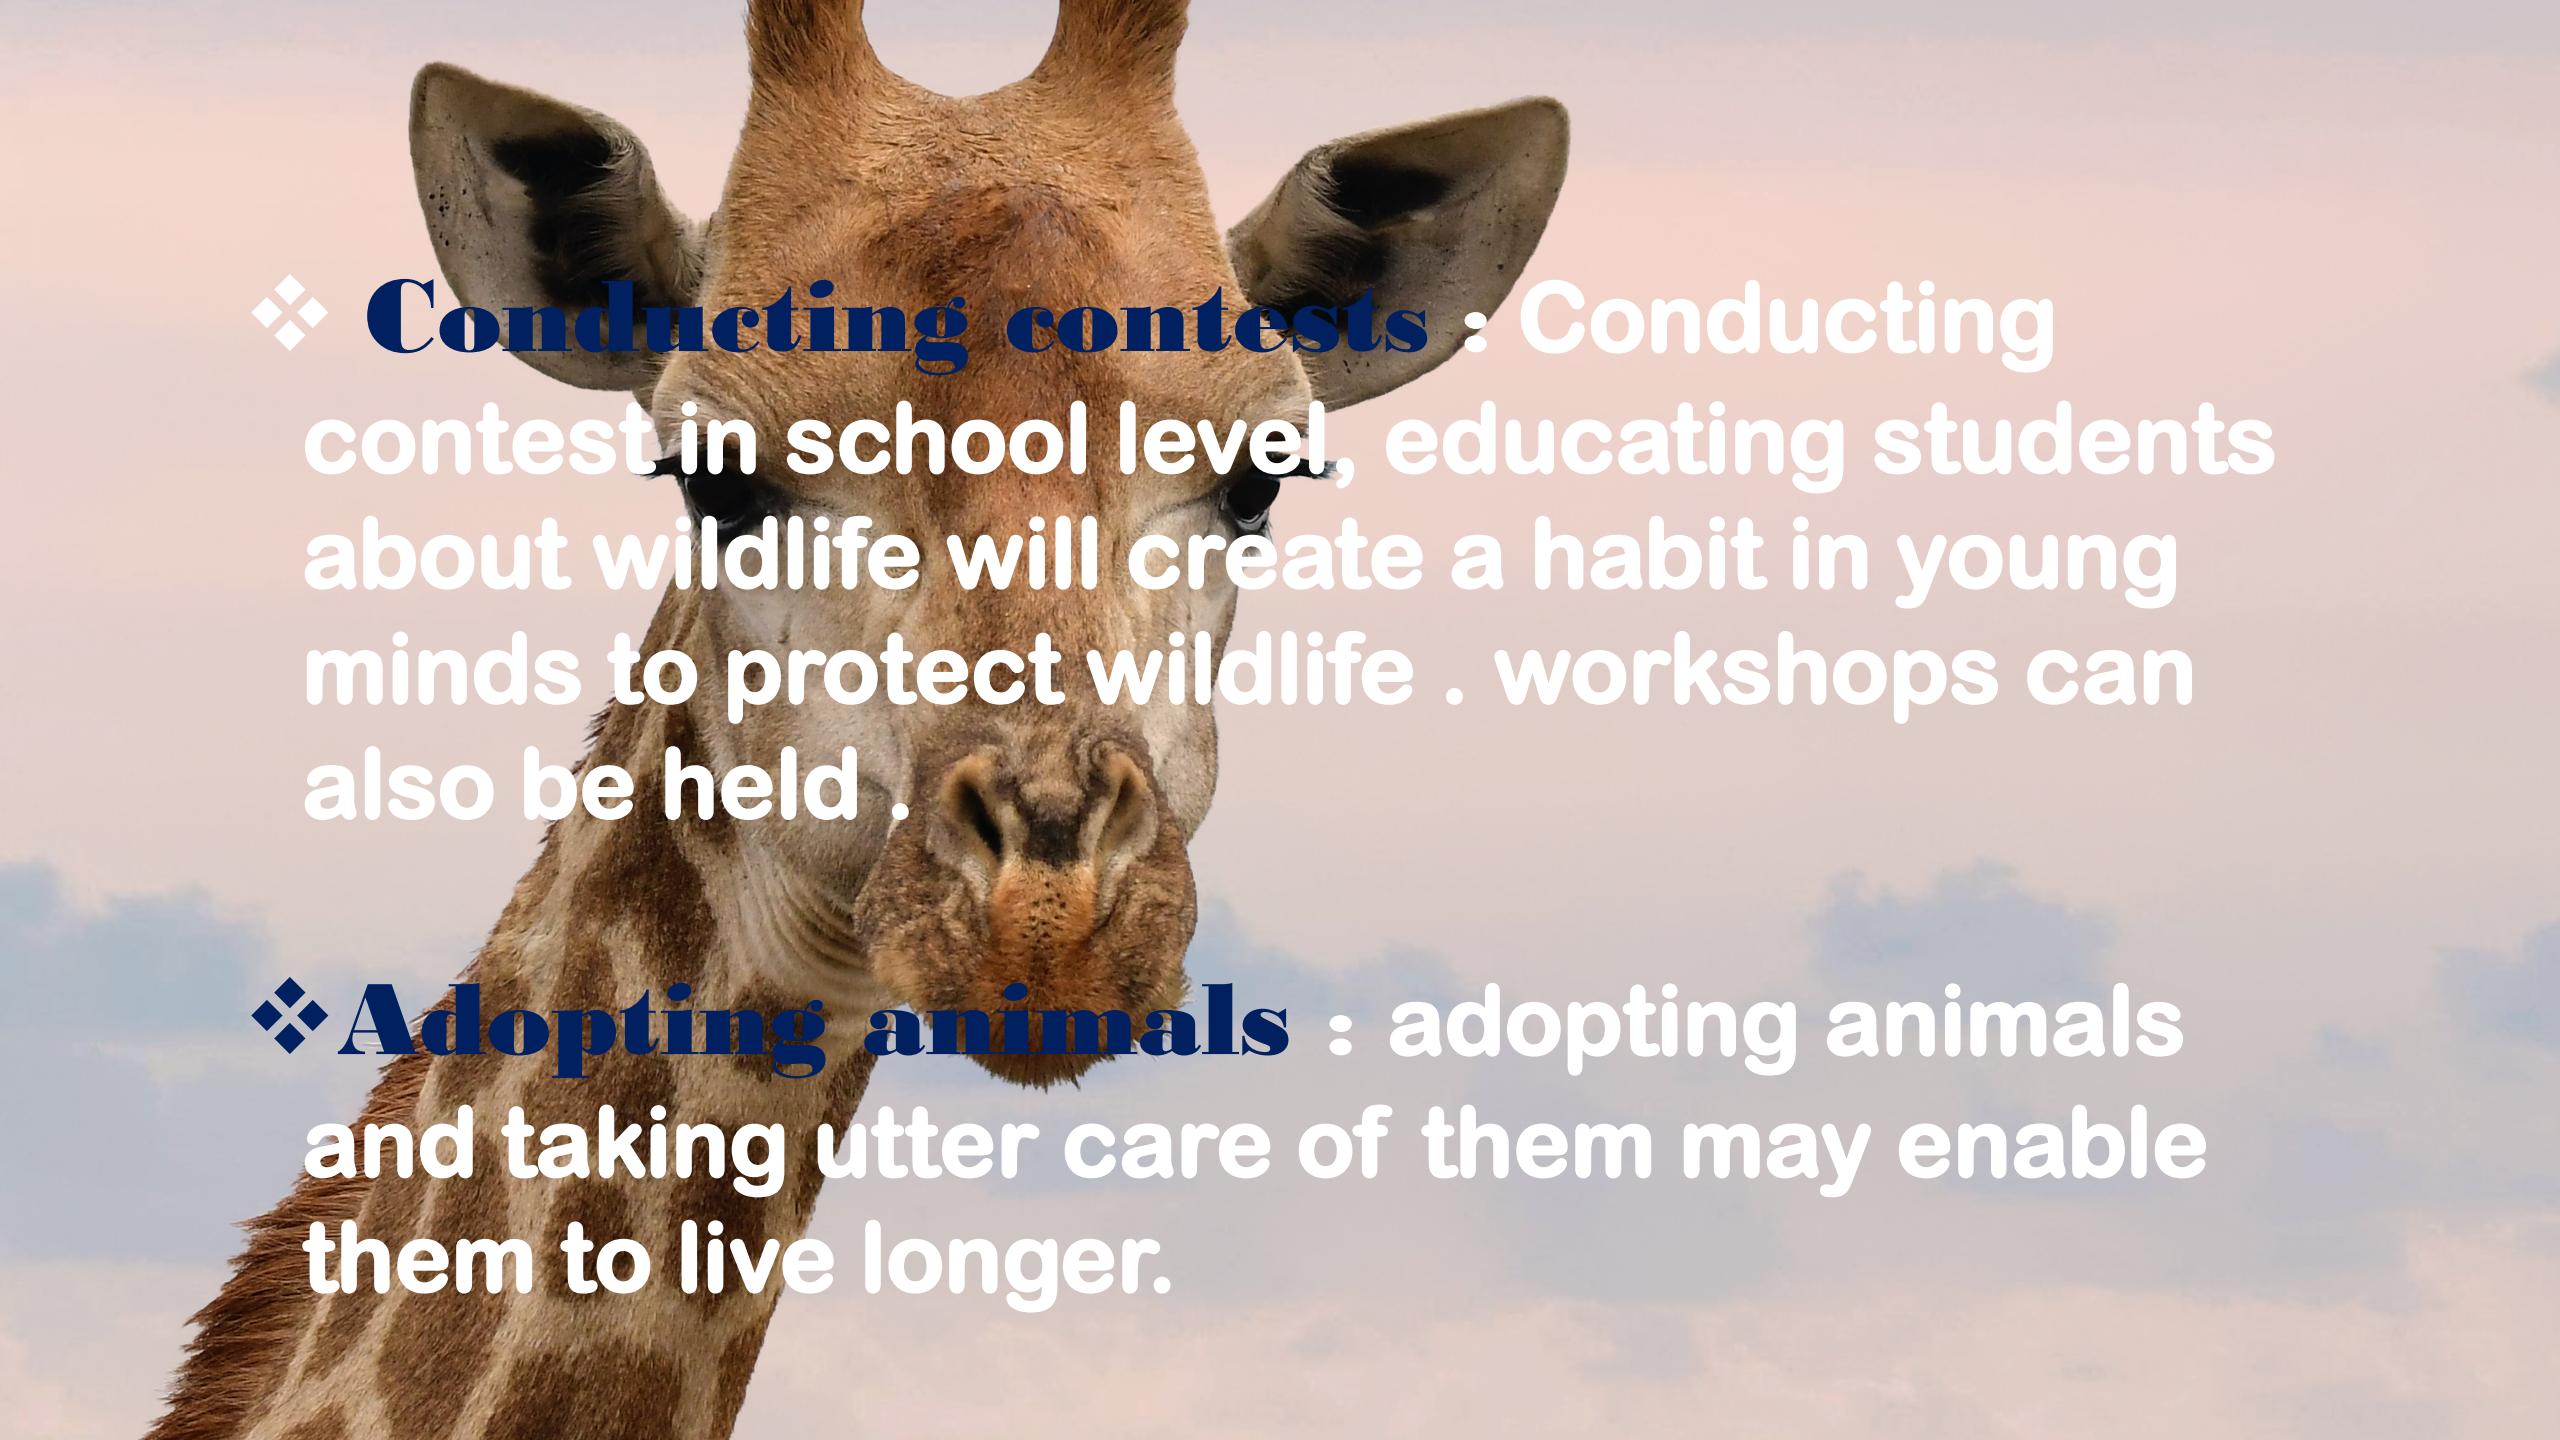

- ❖ **Creating awareness** : Creating awareness by making posters , write-ups etc. spread awareness to people about wildlife.
- ❖ **Reduce the use of plastics** : Reducing the use of plastics and using harmless metals makes sure that no animal consumes plastics or toxic wastes.
- ❖ **Discouraging deforestation** : Discouraging deforestation and educating people about it doesn't destruct any habitat of wildlife.

❖ **Avoid eating wildlife animals:** For us it is a mere meal, for animals it is their whole life. So try to avoid eating animals

❖ **Make small organizations to protect wildlife :** Try to make small groups with your friends to take actions to protect wildlife.

❖ **Avoid exotic animal products :** Avoid using exotic products , the demand will reduce and illegal killing of animals will also reduce .

- 
- ❖ **Conducting contests** : Conducting contest in school level, educating students about wildlife will create a habit in young minds to protect wildlife . workshops can also be held .
 - ❖ **Adopting animals** : adopting animals and taking utter care of them may enable them to live longer.

**Let us not be wild
to wildlife , and
lets protect them !**

My art creation representing this theme:

Thank you !
